

## Clearer and Properly Referenced Documents that Save Estimators' Time, Reduce Risk and Lower Bid Costs

***“98% of estimators and 87% of sub-contractors said that the location information supplied in traditional bills of quantities was inadequate. Both groups said that drawings showing locations should be provided.”*** MR: 46

Every picture tells a story. To ease work of both main and sub-contractors we can, as part of our service, provide cross referenced digital diagrams (PDF's) of all the major measurements.

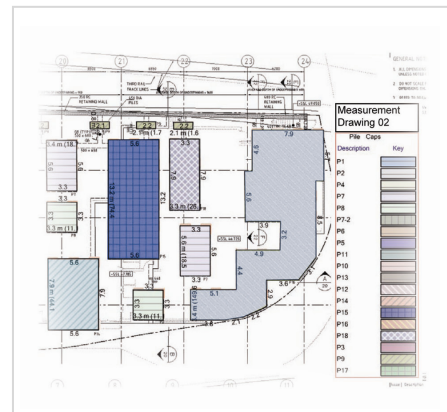

### The Benefits of Clearer Documentation

- Graphics pack allows for the simple and fast identification of the work locations measured when rating (examples on next page).
- Dimension packs require less checking and improve confidence which can lead to lower sub and main contractor rates.
- Reduced risk of error or omission.
- Location diagrams that assist in the use of bills for management control, programming, ordering, valuations etc.

### A Few of the Methods We Use

- Dimensions provided in measured bills can be indexed and referenced to specifications and graphic presentations.
- Presentation graphics can be provided in ftp://: downloads in PDF format for easy access to all those with permission.
- Colour coding systems and mark-ups to match measurement system available.
- Use of measurement variation sheets to update all during bid process.

***A study of American sub-contractors ranked “the clarity of work specifications” as the third most important factor affecting the size of bid mark-up decisions (from the 16 key factors).*** MR:46

*Are You Able to Easily Check the Quantities You Are Using?*
